AB - CN1386943 NOVELTY - A lightweight hollow brick comprises two surface layers and an intermediate layer. The surface layer is made up of cement, sand, cinders and early-strengthening agent. The intermediate layer is made up of cement, sand, foam plastic block, glass fibers and early-strengthening agent. It is made by spreading surface mortar, putting the cores at intervals, spreading intermediate layer mortar, and spreading surface mortar. The brick is lightweight and has low cost, high insulating effect, and high performance.
